

Interior Architecture and Environmental Design and Architecture 2. year students were taken to a technical trip to Kızılbeğ, a village of Fethiye-Üzümlü. Throughout the trip, the students were asked to realize a survey study of Aydınlı Houses designed by the architect Nevzat Sayın. Thus, the students were able to get information about surveying and the construction system of the buildings at the site. Following this study, the students will produce the 2D and 3D drawings and presentations of the buildings digitally. Within the trip, the students also had the chance to visit the settlement in Fethiye-Kayaköy, and were informed about the spatial qualities, materials and construction systems of the houses at the village.
